

Analysis of Lapse times and Course lengths for a series of District Events

The Cumbrian Galoppen has been running for 13 years. Approximately 150 events have been planned on about 25 different areas. The following data has been taken from nine recent consecutive events. The red bar for each set represents the guideline figures (range); for time spread for most of the competitors on the course; length for course. Each colour course is represented by the same coloured bars, the yellow bars being for yellow course data for the nine events. The length bars represent the course (eg 2.4km 120m) with the height converted to length, 100m height gain equivalent to 1km.
